(DX2.5 Brake Bleeder with Auto Refiller Bottle)

DX2.5 Brake Bleeder

The powerful heavy duty construction of the DX 2.5 brake bleeder/flusher is the most convenient way of bleeding brakes by vacuum. The “state of the art” venturi design creates a powerful vacuum to safely and easily extract brake fluid. It comes with a probe, brake bleeder hose with universal adapter and emptying hose.

- Unique “throttle” design with 2 way fluid control
- Dual use as a mini fluid evacuator
- Clean and safe compact storage
- Can be used with all types of non-flammable liquid
- Pressure mode empties the canister

DX Refiller Bottle

A brake fluid refiller bottle that facilitates an effective one man operation brake bleeding process. This accessory eliminates the need to check fluid levels in the brake fluid reservoir during the bleeding process and guards against air being sucked into the brake system. A “must have” to avoid messy spills.

- Simple to use “pop-top” design for “on” and “off” fluid control
- Effortless fluid height adjustment with a “screw in” design
- The 44oz. bottle has graduated fluid level markings
- Easy to handle when refilling with fresh fluid
- Attaches to the DX 2.5 bleeder for convenient storage
- Heavy duty construction
