

DX 12 Fluid Evacuation System

Part # 12-016-5050

The powerful heavy duty construction of the DX 12 fluid evacuator can handle any type of non-explosive fluid evacuation. The state of the art venturi design creates a powerful vacuum to easily extract fluid for any application. The unique two way throttle control allows you to also pressurize the canister to empty or dispense the fluid for warranty applications. This new design creates a true fluid exchange function.

The system includes: two probes, main suction hose, emptying hose, brake bleeder hose and brake fluid auto refiller.

- Unique “throttle” design two way fluid control
- Safe fluid handling
- Built in silencing function for lower noise level
- Ability to charge the canister to operate while disconnected from compressed air
- Can be used with any type of non-explosive fluids
- Brake bleeding/flushing function
- Heavy Duty construction
- 12.7 liter capacity
